## DETAILED ACTION

Claims 1-14 are pending and require restriction

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3 and 8-10, drawn to template-fixed  $\beta$ -hairpin mimetic of the formula R<sup>1</sup>-Cys-Z-Cys-R<sup>2</sup>. Additionally, within the group exists 124 single inventions, too numerous to recite individually, where each R<sup>1</sup> and R<sup>2</sup> pairing is a single invention, unique from the other sequences. For example, the R<sup>1</sup>, R<sup>2</sup> pairing of A-B and B-C is an invention, as is the pairing B-A and C-B, etc.

Group II, claim(s) 4, 5 and 11-14, drawn to a library of template-fixed  $\beta$ -hairpin mimetics of the formula  $R^1\text{-Cys-Z-Cys-R}^2.$ 

Group III, claim(s) 6 and 7, drawn to a method of screening for template-fixed  $\beta$ -hairpin mimetics using the library of Group II against a selected target.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Annex B, Part I(f) of the Administrative Instructions under PCT states that, 
"wherein a single claim defines alternatives (chemical or non-chemical)...the 
requirement of a technical interrelationship and the same or corresponding special 
technical features as defined in Rule 13.2, shall be considered to be met when the 
alternatives are of a similar nature."

The alternatives must comply with subsections (i)(A) and one of either (i)(B)(1) or (i)(B)(2), which requires that, "all alternatives have a common property or activity"

Art Unit: 1654

and "a common structure is present, i.e., a significant structural element is shared by all of the alternatives" (B)(1) or "in cases where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds in the art to which the invention pertains."(B)(2).

In the instant case, the peptides are not asserted to have the same activity/function, as the method of screening requires only "a specific binding partner", failing to satisfy requirement (A). Additionally, the claim fails to satisfy either (B)(1) or (B)(2). The claim recites no specific structure, having only the requirement that the peptide have two Cys which are separated by an unidentified peptide of 4-20 amino acids in length, thus failing to meet the requirements of (B)(1).

Further, in looking to subsection (f)(iii), it is stated that 'recognized class of chemical compounds' means that, "there is an expectation from the knowledge in the art that members of the class will behave in the same way in the context of the claimed invention. In other words, each member could be substituted one for the other, with the expectation that the same intended result would be achieved." One of skill in the art would not recognize these divergent compounds, or other compounds asserted to have said activity/function, as required, to function in the context of the instantly claimed invention. Thus, the claim fails to meet the requirement of (B)(2). As such, the claims lack unity.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Art Unit: 1654

Claims 1-14 are generic to a myriad of peptides. Within each group is a plurality of species, too numerous to recite individually, where each variable is specifically defined. For example, species of R<sup>1</sup> and R<sup>2</sup> are found in claim 2, e.g. Glu-Thr and Thr-Lys (1st pair) is a species of the invention A-B paired with B-A. Additionally, species of Z are found in claims 3 and 10, where Z consists of a specific sequence, while peptides comprising/containing/having does not describe a specific sequence per se.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

A single species is one where all variables are specifically defined such that a single peptide is identified.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

As discussed above, the peptide species fail to comply with subsections (i)(A) and one of either (i)(B)(1) or (i)(B)(2), which requires that, "all alternatives have a common property or activity" and "a common structure is present, i.e., a significant structural

Art Unit: 1654

element is shared by all of the alternatives" (B)(1) or "in cases where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds in the art to which the invention pertains." (B)(2). Thus, for the reasons set forth above, the species also lack unity.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. <u>All</u> claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

Art Unit: 1654

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Additionally, Applicant is invited to identify the R<sup>1</sup>/R<sup>2</sup> pairings, of the 124 recited in Claim 1, that are obvious variants of the elected pairing with their reply.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANDREW D. KOSAR whose telephone number is (571)272-0913. The examiner can normally be reached on Monday - Friday 08:00 - 16:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cecilia J. Tsang can be reached on (571)272-0562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
